

## Bone Plug

Does your vacuum pouch puncture when you package ham? By inserting our "Bone Plug" to cover bone, you will eliminate the loss of pouches, and more importantly the loss of hundreds of pounds of product.

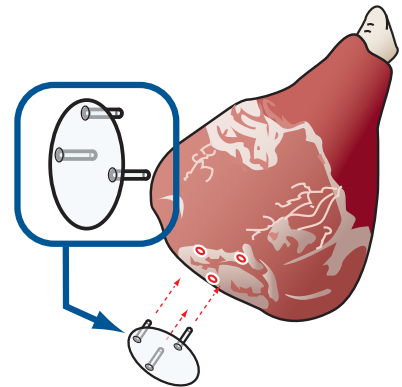

**Other disks** Other formats can be made to your specifications, or even with your name or logo embossed on the disk.

### 3 post

Our most popular format is the three-post disk, it penetrates the meat and completely covers the bone.

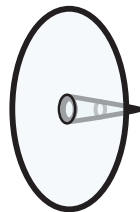

Also, our bone-plug will help to create a hermetic seal which will considerably reduce the deterioration of your products.

Our disks are made with virgin "polyolefins" in order to adhere to FDA or CFIA norms.

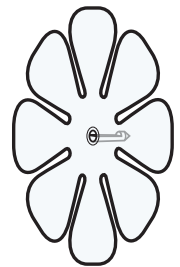

### Cone

We also have the Cone disk with one cone-shaped post which pierces the bone..

### Tulip

We also have the flower-shaped Tulip disk which can cover large, uneven surfaces.

Do not hesitate to contact us for all your packaging needs.
