180 x 260 mm	2000
180 x 300 mm	2000
210 x 400 mm	1000
230 x 300 mm	1000
230 x 500 mm	1000
230 x 660 mm	1000

THE ADVANTAGES OF USING SHRINK BAGS

Makes an attractive packaging which molds the product, primarily used on products with irregular shapes like ham, poultry etc.

Even slightly punctured, the bag continues to mold and protect the product.

By reducing contact with air, we stop oxidation and the growth of bacteria or mold.

Reduces loss of humidity and eliminates freezer burn completely.

Certain models protect against Ultraviolet Rays which are often responsible for the change in pigmentation of food products.

By conserving all of the product's humidity, we maintain its full weight, as well as its full monetary value.

PERFLEX - THE "FISH BAGS"

Specially designed for - . It's high oxygen transfer rate permits odours to dissipate when it is impossible to use a full vacuum. This bag also respects government standards for oxygen protection and is CFIA approved with regards towards "fresh smoked salmon".

Specially designed for poultry.
