

Shrink bags

The uses and advantages of the shrink bag

Its advantages

Makes an attractive packaging which molds the product, primarily used on products with irregular shapes like ham, poultry etc.

Even slightly punctured, the bag continues to mold and protect the product.

By reducing contact with air, we stop oxidation and the growth of bacteria or mold.

Reduces loss of humidity and eliminates freezer burn completely.

Certain models protect against Ultraviolet Rays which are often responsible for the change in pigmentation of food products.

By conserving all of the product's humidity, we maintain its full weight, as well as its full monetary value.

What is a shrink bag ?

A shrink bag works like a regular vacuum pouch, we must first extract all the air from the bag before sealing it.

We then dip the entire packaging in warm water to shrink it onto the product while also reducing excess plastic.

*The ideal water temperature for shrinking the bags is 190° F to 195° F or (89° C to 91° C). Dip for two seconds maximum.

Do not hesitate to contact us for all your packaging needs.

The biggest inventory of vacuum pouches in Canada

No minimum order
Delivery everywhere in Canada

The different types of SHRINK bags

There are many types of shrink bags. It is therefore important to identify and define your needs

Which shrink bag to choose ?

DuraShrink

Coextruded multilayered pouch. High barrier.

Retrac-a-Pac

Coextrusion of Nylon and Polyolefins which is extra strong and very clear, made for more puncture resistance, also gives the product a nice appearance while still protecting the product's colour.

Clear Tite 11/12

Ideal for cheeses, it offers a good humidity barrier, which conserves the product's weight as well as reducing mold.

Clear Tite 15/16

Specially designed for products producing CO2 such as Swiss cheeses.

Clear Tite 51/52

Coextrusion, giving the product a good transparency, very good oxygen barrier, it is recommended for delicatessens.

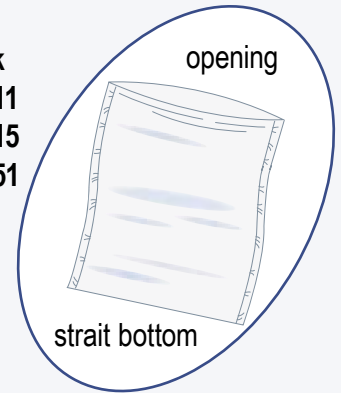

Perflex

Specially designed for poultry. It's high oxygen transfer rate permits odours to dissipate when it is impossible to use a full vacuum. This bag also respects government standards for oxygen protection and is CFIA approved with regards towards "fresh smoked salmon".

Whatever your needs may be, we probably have the solution for your problems, we can make the bags to your size or to your specifications.

Warning

Store only in a cool and dry place, far from any source of heat and direct sunlight. The recommended temperature for storage is between 40° F and 75° F (or 4° C and 24° C). It is important that the product be rotated and that each box be easily identified. Do not use knives or other cutting instruments to open the boxes, to prevent any damage to the bags.

How to measure a shrink bag

Width

- Take the circumference of the product (at the largest extremity)
- Multiply (x) by .55

Lenth

- Take the circumference of the product (at the longest extremity)
- Divide(÷) by 2
- Add the height of the product
(2 inches minimum + 2 inches for the seal)

Your packaging is your most important promotional tool.

Yes we print ! It is possible to print a shrink bag, however we must take in account the fact that our bags can shrink up to 50% in certain cases, which will distort the printed images.

Several colours are available in addition to clear bags:

WHITE -RED - GOLD - BURNT ORANGE or LIGHTLY TINTED

Our computer graphic department can advise you on how to proceed.
